

A hand wearing a blue microfiber cloth is shown polishing a glass surface. The glass is covered in numerous scratches and water droplets, giving it a textured, distressed appearance. The background is a blurred, teal-colored scene, possibly a car window or a similar glass surface. A dark grey trapezoidal box is overlaid on the center of the image, containing white text. A large white question mark is positioned in the lower right quadrant of the image. In the lower left, there are several colorful, overlapping brush strokes in shades of red, orange, and yellow.

Can you polish  
*scratches*  
out of glass?

# You're cleaning your Glass Sliding Door

Only to find scratches on the glass, right about where your furry friend jumps at the door when they want to go in or out.

They don't seem to go away with cleaning, so they must be deeper scratches than first expected, but polishing the glass should get them out, right?

**Polishing actually  
removes material  
which creates a weak  
point in the glass**

Even if you take off the smallest amount away.

This leads to localised pressure on the glass, and an increased likelihood that the glass will break from that point.

The best and safest  
option is to...

Replace the  
panel of  
**Glass**  
COMPLETELY

Apply tinting to the glass  
panels to protect the  
glass.

Protect your family today,  
and choose  
Diverse Glazing Group  
as your glazing specialist.
